BUSINESS HIGHLIGHTS

East Power Group
The East Power Group is off to another strong start in 2001. The realignment of the group into regional business units with joint trading, mid-marketing, and origination operations has proven to be a catalyst for deal flow, producing both a high volume of transactions and high value. More transactions were executed in January than any month last year, including one deal that will bring tremendous strategic value to Enron as well.

Executed in January, was the purchase of two 35 MW coal-fired cogeneration facilities located in southeastern North Carolina. ENA will supply steam to the industrial host, Alamac Knit Fabrics, and will sell power into the merchant market. The plants are inside Carolina Power & Light's service territory, which is connected to AEP, Virginia Power, Duke, SCEG and SCPSA. These plants are the first purely merchant facilities in North Carolina. This deal exemplifies how Enron leverages its talent in that originators from the East Power Group and Industrial Markets Group joined forces to bring this deal to execution. They also leveraged the Global Markets group to manage the coal supply and emissions issues.

Prospects going forward look promising as a number of high value transactions are in the pipeline. Of particular note is The Sandhill Power Project, a 180 MW peaking facility currently under construction in Austin. The facility is scheduled to come online in June, in time for the advent of deregulation in Texas. The joint venture, between EPMI and Austin Energy, will provide both trading groups with a highly flexible asset, enabling them to access real-time volatility while hedging existing obligations.

Additionally, the Fort Pierce (Florida) City Council voted 5 to 0 in favor of Enron's proposal to repower the Ft. Pierce Utilities Authority's (FPUA) existing power plant in that city. Our proposed 180 MW facility will be used to produce steam to power the H.D. King facility at approximately 20 percent less cost than FPUA can produce it. According to FPUA officials, this reduction in cost may lead to reduced rates for their ratepayers. The planned in-service date is summer of 2002.

Industrial Markets
EIM Fundamental Analysis Group grows again! The Fundamental Analysis Group continues to expand its staff and capabilities. They will be introducing you to specific activities in the weeks to come, but would like to introduce you to the new staff members who have joined in the past month.

On the paper/pulp/lumber side, Bin Wang is responsible for supporting the lumber group; Adnan Patel will be assisting with newsprint and structured transactions.

For the steel group, Doug Parsons and Yana Kristal are providing market analysis and econometric/price forecasting support. Our latest recruit, David Maxwell, is assisting with the evaluation of a customer management system and developing analytical databases for all product lines. A visible enhancement to the group■,s operations has been the Intranet web site, which has been in development for the past three months. The site will be transferred to a production server by the end of February. The site contains all types of industry, market, regulatory, analytical, and financial information for deal analysis.

Another major development is the adoption of a customer information management system. EIM is currently evaluating Siebel Systems, a software provider that has developed this type of information tool for EES.

IN THE NEWS

Enron has been named the "Most Innovative Company in America" for the sixth consecutive year by Fortune. That's right -- six years in a row. We
