Subject: Weather Channel Memo

FYI - Attached is a quote from a recent TWC memo that should be of interest given our recent conversations....

Charlie

"December's winter weather events, coupled with early wintry weather in October and November, boosted the network to an all-time high 4th quarter rating, despite comparatively lower averages early in the quarter due to quieter than usual hurricane activity."

Subject: TWC News

This is a section from an internal TWC memorandum - it looks like Q4 might make up for the quiet tropical season as far as their profits are concerned...

WEATHER CHANNEL EARNS HIGHEST RATINGS FOR ANY DECEMBER IN ITS HISTORY
Coverage of last month's "Winter Blitz" brought The Weather Channel the highest ratings for any December in its 18-year history and shattered weather.com's previous December page view records. December 2000 was the third highest-rated month ever. The Blizzard of '96 gave TWC its highest ratings, followed by Hurricane Floyd in September 1999.
Among the many recording-breaking weather events reported by TWC last month were the snowiest weather ever in at least 12 cities and the coldest weather

on record in many places, including Louisville, Ky.
December's winter weather events, coupled with early wintry weather in October and November, boosted the network to an all-time high 4th quarter rating, despite comparatively lower averages early in the quarter due to quieter than usual hurricane activity.
TWC's coverage of the year-end Nor'easter that blanketed New York City with over a foot of snow achieved a 0.870 rating, delivering 679,000 households across the country on Saturday, December 30 (6 a.m.-6 a.m.). The top quarter hour occurred at 10 a.m. with a rating of 2.279 reaching 1.8 million households. The weekend rating for Dec. 30-31 was 0.753, representing over a half million households tuned in at any given time, according to Nielsen data. This was the second highest-rated weekend in 2000 and the sixth highest-rated weekend in TWC's history.
Consumers also turned to weather.com in record numbers. By the close of December, weather.com delivered more than 429 million total page views, which is 67 percent higher than the previous monthly record, and 232 percent higher than December 1999. At its peak, weather.com delivered a record 27.8 million page views in a single day. More than 1.3 million Unique Visitors frequented weather.com per day during the two weeks prior to Christmas, according to Media Metrix.
The average TWC rating (6 a.m.-6 a.m.) from Dec.16-31 was 0.598, delivering an average of 464,000 households, according to Nielsen. This was 85 percent higher than the average rating for the same two-week period the year before.
The Weather Channel's coverage of sustained winter activity, which included a Chicago blizzard on Dec. 10-11, brought the network its highest-rated December ever. TWC achieved a December rating of 0.462 (6 a.m.-6 a.m.), delivering an average of 360,000 households.
