It's worth going to this site just to "flip the switch" and see the redacted portions appear before your very eyes!

Ken Smith just called my attention to the following. See this link for all formerly censored language from the DWR contracts:

http://www.sco.ca.gov/power_page/contract_info.htm

Also, see the summary link.

Finally, below is an interesting article about the real cost of the contracts.

Connell: Power cost twice Davis' figure July 6, 2001 By JOHN HOWARD The Orange County Register SACRAMENTO -- The average cost of electricity purchased under $43 billion of worth of state contracts is actually more than double the amount reported by Gov. Gray Davis' administration, state Controller Kathleen Connell said Thursday. Connell said her staff's analysis

put the per-megawatt average at $170, compared with $69 to $79 estimated by Davis. Connell stopped short of suggesting that the higher cost could drive another increase in rates, although consumer groups said the higher amount likely would require some future increase. The controller, who writes the state's checks, said her figures assume fixed prices for natural gas over the duration of the contracts, which range from a few months to 20 years. The administration, noting that nearly half its contracts are pegged to the fluctuating market price of natural gas, said costs on many of the contracts would decline over time. Consumer groups were skeptical of the administration's numbers. "You could cut these numbers in various ways and make different averages, long-range or short-range contracts, peak power or nonpeak, and probably either average could be defended mathematically," said Nettie Hoge of The Utility Reform Network. "We can't tell you whether it's $69 or $170 - the contracts are very convoluted and complex."
